# **NumPy Exercises**

Now that we've learned about NumPy let's test your knowledge. We'll start off with a few simple tasks, and then you'll be asked some more complicated questions.

### Import NumPy as np

```
In [1]: import numpy as np
```

#### Create an array of 10 zeros

```
In [2]: np.zeros(10)
```

# Out[2]: array([0., 0., 0., 0., 0., 0., 0., 0., 0.])

## Create an array of 10 ones

```
In [3]: np.ones(10)
Out[3]: array([1., 1., 1., 1., 1., 1., 1., 1.])
```

### Create an array of 10 fives

```
In [4]: np.ones(10) * 5
Out[4]: array([5., 5., 5., 5., 5., 5., 5., 5.])
```

## Create an array of the integers from 10 to 50

### Create an array of all the even integers from 10 to 50

#### Create a 3x3 matrix with values ranging from 0 to 8

```
In [7]: a = np.arange(0,9)
b = a.reshape(3,3)
print(b)

[[0 1 2]
       [3 4 5]
       [6 7 8]]
```

### Create a 3x3 identity matrix

# Use NumPy to generate a random number between 0 and 1

```
In [15]: np.random.rand(1)
Out[15]: array([0.43118592])
```

#### Use NumPy to generate an array of 25 random numbers sampled from a standard normal distribution

#### Create the following matrix:

# Create an array of 20 linearly spaced points between 0 and 1:

# **Numpy Indexing and Selection**

Now you will be given a few matrices, and be asked to replicate the resulting matrix outputs:

```
In [24]: mat = np.arange(1,26).reshape(5,5)
         mat
Out[24]: array([[ 1, 2, 3, 4, 5],
                [6, 7, 8, 9, 10],
                [11, 12, 13, 14, 15],
                [16, 17, 18, 19, 20],
                [21, 22, 23, 24, 25]])
 In [0]: # WRITE CODE HERE THAT REPRODUCES THE OUTPUT OF THE CELL BELOW
         # BE CAREFUL NOT TO RUN THE CELL BELOW, OTHERWISE YOU WON'T
         # BE ABLE TO SEE THE OUTPUT ANY MORE
In [25]: mat[2:,1:]
Out[25]: array([[12, 13, 14, 15],
                [17, 18, 19, 20],
                [22, 23, 24, 25]])
 In [0]: # WRITE CODE HERE THAT REPRODUCES THE OUTPUT OF THE CELL BELOW
         # BE CAREFUL NOT TO RUN THE CELL BELOW, OTHERWISE YOU WON'T
         # BE ABLE TO SEE THE OUTPUT ANY MORE
```

```
In [26]: mat[3,4]
Out[26]: 20
In [27]: # WRITE CODE HERE THAT REPRODUCES THE OUTPUT OF THE CELL BELOW
         # BE CAREFUL NOT TO RUN THE CELL BELOW, OTHERWISE YOU WON'T
         # BE ABLE TO SEE THE OUTPUT ANY MORE
In [28]: mat[:3,1]
Out[28]: array([ 2, 7, 12])
 In [0]: # WRITE CODE HERE THAT REPRODUCES THE OUTPUT OF THE CELL BELOW
         # BE CAREFUL NOT TO RUN THE CELL BELOW, OTHERWISE YOU WON'T
         # BE ABLE TO SEE THE OUTPUT ANY MORE
In [29]: mat[4,:]
Out[29]: array([21, 22, 23, 24, 25])
 In [0]: # WRITE CODE HERE THAT REPRODUCES THE OUTPUT OF THE CELL BELOW
         # BE CAREFUL NOT TO RUN THE CELL BELOW, OTHERWISE YOU WON'T
         # BE ABLE TO SEE THE OUTPUT ANY MORE
In [30]: mat[3:,]
Out[30]: array([[16, 17, 18, 19, 20],
                [21, 22, 23, 24, 25]])
```

# Now do the following

Get the sum of all the values in mat

```
In [32]: np.sum(mat)
Out[32]: 325
```

#### Get the standard deviation of the values in mat

```
In [33]: np.std(mat)
```

Out[33]: 7.211102550927978

#### Get the sum of all the columns in mat

```
In [34]: np.sum(mat,axis = 0)
```

Out[34]: array([55, 60, 65, 70, 75])
